Excel VBA Level 1 – Recording/Running Macros and Writing Formulas and Data to Cells

Days: 1
Course Fee: $395.00 – KnowledgeWave Learning Site & Government Discounts Available.

Visual Basic for Application (VBA) is a programming language designed for automating tasks in Microsoft Office. This one-day training session focuses on the VBA as it applies to Microsoft Excel – specifically recording and running macros, writing data and formulas to cells. The use of VBA in Microsoft Excel will improve the user experience and productivity with the application. Participants will learn how to record and modify macros to automate business processes. Participants will learn about the various options for storing macros and running macros. Participants will learn how to interact with cells with a focus on offset and resize.

At the end of this course, attendees will understand how to:

- Record macros to solve simple business solutions.
- Identify the macro storage option that best fits their business environment.
- Identify the best method for running the macros in their business environment.
- Identify the various options for writing data to cells and select the appropriate method that fits the scenario.
- Write formulas using the R1C1 notation.

This class is the first in a series focused on VBA for Excel.
